

With the ever increasing pressures on Fleet Managers and the increasing administrative burden operators are facing Timeplan are able to provide a range of management services. These aim to assist in simplifying processes, and provide savings in administrative time and effort whilst at the same time improving the management and efficiency of the fleet.

Through using our experience of developing and operating fuel management systems and our proven capability in being able to poll and download data remotely we are able to provide a range of management services. These services help with administration and management by downloading, processing, inspecting, correcting and analysing data and simplify the management and control of tags:

Management Reporting

Timeplan can:

- Interrogate and analyse all data transactions
- Provide accurate and timely fuel reports tailored to meet customer needs and in a user friendly format
- Download information remotely

Tag management

In addition Timeplan can undertake all the day to day administrative activities associated with managing tags including:

- Programming/re-programming tags
- Auditing/managing tag issues
- Identifying tags
- Dispatching tags to users

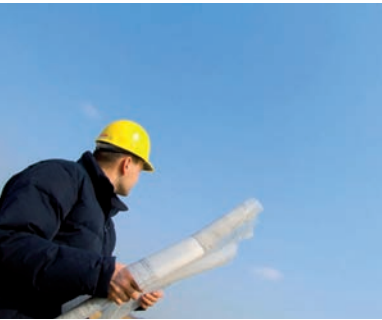

In addition using our recently developed Stock Management software we can manage the day to day activities associated with the ordering and management of your fuel stocks including:

- Maintaining stocks within agreed parameters
- Ordering fuel in accordance with contracts/agreements
- Expediting deliveries
- Investigating losses/discrepancies
- Reconciling pump and tank data

Using our many years experience of purchasing fuels we are also able to assist in analysing and tendering your fuel requirements in order to achieve best value for money.
